DESCRIPTION

The group is made up of personnel from the Research Institute of the Hospital de Sant Pau (IR-HSP) and the Biochemistry Department of the Hospital de la Santa Creu and Sant Pau (HSCSP). The group's main lines of research focus on the study of the molecular mechanisms underlying the development of cardiovascular diseases, specifically those derived from alterations in lipoprotein metabolism or inflammatory processes. Our objective is to transfer the knowledge obtained from the lines of translational research to clinical application in a Clinical Biochemistry Laboratory of a University Hospital.

MAIN LINES OF RESEARCH

Atherosclerosis Mechanisms

- Mechanisms leading to lipoprotein aggregation and cholesterol accumulation in the arterial wall.
- Mimetic peptides derived from apoJ as therapeutic tools.
- Inflammatory, apoptotic, and lipid accumulation-related pathways induced by modified LDL in monocytes, endothelial cells, and cardiomyocytes, in the context of diabetes, obesity, heart failure, and ischemic stroke.
- Analysis of the secretome of the adipose tissue from cardiac surgery patients with diabetes or obesity.

Diagnosis and Biomarkers

- Analysis of apolipoprotein J (apoJ) as a marker of CVR.

05.1.1 Cardiovascular Diseases Area

- Assessment of new biomarkers of acute and chronic cardiovascular disease.
- Biomarkers of epicardial fat accumulation.
- Development of algorithms for ruling out acute coronary disease.
- Development of methods for point-of-care biomarker measurement.
- Vulnerability markers to assess carotid plaque inflammation in ischemic stroke.
- Puig Grifol, Nuria. Contractes Predoctorals PFIS 2020. FI20/00252. Instituto de Salud Carlos III (ISCIII). Duration: 2021-2024. 82.400,00 €.
- Rives Jiménez, José. Tejido adiposo epicárdico en obesidad y diabetes. Mecanismos moleculares de riesgo cardiovascular y búsqueda de nuevos biomarcadores. Beca post-residencia a proyectos de investigación 2022. Fundación J.L.Castaño y Sociedad Española de Medicina de Laboratorio (SEQCML). Duration: 2022-2023. 15.000,00 € (FGS).

SCIENTIFIC CHALLENGES

- Determine the intracellular mechanisms involved in the inflammatory response induced by LDL(-) and the components of the particle that entail atherogenicity.
- Analyze the therapeutic potential of mimetic peptides derived from apoJ to delay the development of atherosclerosis in animal models.
- Find new markers of cardiovascular risk in diseases such as diabetes, obesity, HIV, or cardiac failure.
- Strengthen international collaborations to set up future applications for International funding and participation in multidisciplinary international research projects. Investigate if PCSK9 antibodies correct HDL dysfunction in familial hypercholesterolemia.
